WAVEFORM

Commercial Cellular DAS Design Service

We've been designing cellular coverage solutions for over a decade. We know the technology better than anyone, and we'll use that knowledge to make sure that your project happens without a hitch!

Working with Waveform is simple!

Initial Review

- Floor plan size and space analysis
- Building materials and project specifications
- RF coverage solution estimates

1 to 3 days

Field Testing

- Guided testing of cell signal environment
- Recommendation of DAS platform

1 to 2 days

Design & Proposal

- Professional iBwave DAS Design with heatmaps
- Equipment and component costs

3 to 7 days

Self-Install & Support

- Guided self installation, using detailed diagrams and plan
- Lifetime remote monitoring and support

1 to 2 weeks

We'll start with a review of the floorplan and projects specs for the building to understand the scope of the project, and the appropriate solutions. Next we'll guide you through field testing to help us understand the cell signal environment.

With that info, we'll create a professional DAS design using the industry standard iBwave. Using the data about signal strength, user capacity, and building characteristics our team will recommend the best DAS solution for your facility.

Once you're ready to install, our experts are always on hand to guide you through the process, and thereafter provide lifetime support, so you'll never have to worry about coverage again.

The Waveform Advantage

DAS agnostic

We have no preference for a certain manufacturer's equipment over another, and we have no affiliations with carriers. We're perfectly positioned to design the best solution for your unique signal situation.

Proud to share our work

We're proud to share our designs with you and explain the rationale behind our recommendations. You'll gain insights about signal values, building construction, and user load , so you can confidently make a decision that achieves your business and budgetary objectives.

Cost effective and quick

A traditional cellular DAS can cost anywhere from $2 to $4 per square foot. Our solutions come in at a fraction of that cost: as little as $0.50 to $1.00 per square foot. By empowering you to install the system on your own terms, we're able to turnaround most projects within 2 weeks.

Some of Our Customers

Waveform is the leading expert in boosting cell signal for commercial and consumer applications. We've helped over 30,000 customers improve their signal. Whether it's a large home, school, hospital, or a 50,000 sq ft office, we've seen it all!

Our team of dedicated signal specialists has designed and configured thousands of cellular coverage solutions and small cell systems across the country.
We're ready to help improve your signal!
